PROFILE

Engineering Lead at Mobimeo, Deutsche Bahn's mobility subsidiary, leading three product teams. I've been a software engineer for over ten years, still write production code and use agentic AI coding every day. I'm also a security focal point and member of Mobimeo's security committee.

EXPERIENCE

Mobimeo GmbH 11/2020 – Present
Engineering Lead 03/2023 – Present

Lead the Mobility Marketplace, Pay and User teams (11 direct reports) at Deutsche Bahn's mobility subsidiary. The teams integrate everyday mobility, such as bike and e-scooter sharing, into Deutsche Bahn's customer products. I plan each quarter with the CTO (engineering goals) and with the product leads and the CPO (product goals), make technical decisions for my teams and coordinate them with other architects across Deutsche Bahn.

- Built and launched DB Benefits with my teams in a few weeks, using agentic AI coding: a benefits platform for Deutschland-Ticket holders with 50+ partners. It ships several times a week and had a six-figure user base within weeks of launch.
- Integrated bike and e-scooter sharing (Call a Bike, Dott, Voi) into DB Navigator, where customers book and pay with their DB account. The app has 21M+ customer accounts.
- Responsible for hiring, performance reviews and growth of the engineers, and led the teams through a reorganisation.
- Still write production code (TypeScript, Node.js, AWS, Kubernetes, Terraform), most recently a shared cache and an image CDN for the benefits project, and take part in the on-call rotation. I do this almost entirely with agentic AI coding and keep trying new tools and courses.
- Security focal point: helped build the ISMS and get our ISO 27001 certification, wrote security policies and am frequently interviewed by auditors.

Staff Software Engineer 06/2022 – 03/2023

Chapter Lead of the Node.js chapter and Tech Lead in the platform domain, first for the Mobility Budget product, later for the customer-service back office.

- Maintained the chapter's shared Node.js library (logging, tracing, HTTP client, authentication) and the service template with its CI/CD workflows, including license checks and coverage reports.
- Tech Lead of the back office, a multi-tenant React and Node.js app that customer-service agents use to look up customers and handle bookings, invoices and refunds for our business partners. Introduced end-to-end tests and SonarQube.

Senior Software Engineer 11/2020 – 06/2022

Joined Mobimeo with the transfer of moovel teams from the BMW Group and Daimler Mobility joint venture.

- Worked on the Mobility Budget backend: restructured the core service, tightened static analysis and added LocalStack for local AWS development.
- Built the authentication and authorization middleware of the shared Node.js library and helped set up the React component library with Storybook.

moovel Group · Reference ↗ 11/2017 – 11/2020
Software Engineer & Product Owner 11/2018 – 11/2020

Led the go-live of Mobility Budget, a platform that lets companies give their employees mobility budgets, as Product Owner and core engineer, and rolled it out to the first business partners.

- Built the backend in TypeScript and Node.js on AWS: an API, an event broker (SNS, SQS) and a scheduled service that creates the benefit cycles, with PostgreSQL and CloudFormation. First production release in May 2019.

- Made it more reliable: advisory locks so several event broker instances can run safely, health checks, New Relic monitoring and database transactions around the periodic jobs.
- Co-built the React and GraphQL dashboard for operators, with invitations, CSV member upload and role-based access.
- Moved test runs to GitHub Actions, added automated tests for the CloudFormation templates and set up a vulnerability reporting process.

Web Developer 11/2017 – 11/2018

Built and maintained moovel's public websites and a web component library, and set up their AWS infrastructure as code, including DNS, certificates and the proxy in front of moovel.com.

Master's Thesis Student

Thesis: Corporate Component and Service Libraries, a concept for creating, maintaining and managing a company-specific UI component library in front-end web development.

Freelance · Web Designer & Developer 2013 – 2017

Parkpocket · Reference ↗ 10/2014 – 07/2015
CTO 02/2015 – 07/2015

Led the development team of a Munich mobility startup in Telefónica's Wayra accelerator, whose app helps drivers find parking garages in Germany, Austria and Switzerland, with availability, prices and opening hours.

- Built up an agile development team: recruiting, one-to-ones and performance reviews, with functional and disciplinary responsibility.
- Connected company goals with technical requirements, coordinated the project work and set up DevOps basics (versioning, automation, testing, monitoring).

Full Stack Developer 10/2014 – 02/2015

Architected the core backend services and a scalable AWS infrastructure, and built a REST API for B2B customers with authentication and AES encryption in PHP. Also relaunched the company website.

EDUCATION

M.Sc. Computer Science & Media 2015 – 2017
Stuttgart Media University · Grade 1.3 (1.0 = best) · Diploma ↗

B.Sc. Media, Information Engineering and Design 2011 – 2015
University of Applied Sciences Offenburg · Grade 1.2 (1.0 = best) · Diploma ↗

AI-Powered Software Engineer Nanodegree (in progress) 2026 – Present
Udacity

SKILLS

Engineering: Event-Driven Microservices, Domain Modeling, Payment & Provider Integrations, Cloud Cost Optimization, CI/CD, On-Call & Incident Response, Agentic AI Coding

Security: ISMS, ISO 27001

Stack: TypeScript, Node.js, Express, Next.js, React, PostgreSQL

Cloud & Infrastructure: AWS, Kubernetes, Helm, Terraform, Docker

Observability: OpenTelemetry, Prometheus, Grafana

Tooling: GitHub & GitHub Actions, Playwright, Cypress, SonarQube, GitHub Copilot

Languages: German (native), English (fluent), Latin (Großes Latinum)
